Experienced Developer for new Defence project

Would you like to influence a new project? Do you have experience of developing the best software solutions? And are you ready to make a difference for a major international customer? Then maybe you should apply to join our new project team.

You will make your mark on project development and have close customer contact

As a developer, you will be part of a professionally strong team in our Defence department that develops complex solutions within Electronic Warfare for a major international customer. You will work on all aspects of software development, from clarifying the customers' requirements to implementing the finished solution. The team and the project are new and will operate in a highly specialised area. Therefore, you will have influence on your own role and the direction of the project moving forward.

Your role will also include responsibility for developing existing projects in their technical infrastructure and workflows so that they create the maximum value for our customers. These tasks cover a broad range and include standalone assistance for implementation and full responsibility for roll-out.

As a developer, you will have the following duties:

- Clarifying requirements in cooperation with the customer
- Developing software
- Providing support during integration, system and acceptance testing
- Installing and configuring Systematic's software – usually within the customer environment
- Integrating 3rd party components
- Supporting the customer's specialist solution

You will be associated with our West European market unit, reporting to a project manager in Aarhus. There is scope for travel and potential foreign secondment for shorter or longer periods.

You will make a difference with professionally strong colleagues

You will be part of a cross-functional team of experienced developers, architects, testers and a project manager, who independently plan and implement the project for the customer. We have the courage to challenge and develop ourselves and one another. We focus on sharing knowledge as part of our work, and we are always looking for ways to develop more smartly. Together we build a culture that enables everyone to take the necessary decisions in day-to-day life. You will face a challenging workday, in which close cooperation with customers is the key to ensuring we make a difference.

Experienced developer with desire for responsibility

We expect that you will have a minimum of three years' experience of software development and implementation of software solutions in cooperation with customers. You enjoy customer contact and are good at working in teams. At the same time, you are ready to take full responsibility for an assignment.

You have experience of or interest in some of the following areas:

- Primarily MS Windows technologies and preferably Unix technologies
- Java EE and/or .NET (C#), Groovy, Scala – in this regard experience of C# would be a particular advantage
- HTML, CSS, JavaScript (AngularJS), XML, XSD, XSLT
- SOAP, REST, HTTP, SSL/TLS, TCP/IP
- jPA, SQL (MSSQL, MySQL, Oracle, Postgres)
- Object-oriented design and design patterns
- Test-driven development, profiling, optimisation
- Continuous integration and deployment, scripting

We work with security-classified projects, and therefore, you as an employee at Systematic need to have security clearance.

To apply for this position, send your application and CV to: mbu@workindenmark.dk
