inContext was founded in 2006 and we have, since the start, focused on building long term relations with our clients within the electrical equipment, automotive and home appliances industries. We provide consultancy services of experienced and dedicated consultants who support our clients in future defining projects. For the last two years, we have been awarded Dagens Industris Gasellföretag and Veckans Affärer's Superföretag. As we are rapidly growing our business, we are always looking for driven and experienced people to join our team and support our complex assignments.

As we are expanding and growing our business, we are now looking for **Embedded SW Engineers** to join our team and support our technically challenging assignments for our customer in the automotive industry.

As an Embedded SW Engineer, your key responsibilities are:

- Develop and establish physical models in Simulink
- Manage virtual tests of Simulink models, and other tests such as on desk, in cell and on the vehicle
- Generate code from Simulink and implement the code in ECU's
- Calibration and maintenance
- Define and document requirement specifications

To be a successful candidate for this role you most likely have a Master's degree in Mechatronic Engineering, or equivalent. Previous experience of Simulink and C programming is a requirement. As this assignment is for our customer in the automotive industry, it is vital that you have a genuine interest of vehicles, and the automotive industry in general. You are fluent in both Swedish and English, written and spoken. Due to the nature of the work and type of industry, previous experience of ECU's is an advantage, and to hold a C driver license is a merit but not a requirement.

This is an exciting role that provides many technical challenges, and for the right person, there are great potential and opportunities for personal development. As an employer, we provide a stable and inspiring environment coupled with exciting and challenging assignments with our clients.
