

Corresponding legislation

'The State Public Employment Service's Employment Observatory works across a nationwide network to analyse labour market conditions and trends, as well as the vocational training situation, in collaboration with the autonomous communities.'

Royal Legislative Decree 3/2015 of 23 October, approving the consolidated text of the Employment Act.

'The Ministry of Employment and Social Security, via the Observatory of the State Public Employment Service, in coordination and cooperation with the autonomous communities in the exercise of their powers, via the Sector Conference on Employment and Labour Matters, and social agents, via the General Council of the National Employment System, will be responsible for the ongoing analysis and identification of training needs within the productive system.'

Law 30/2015 of 9 September, regulating the system of vocational training for employment.

Royal Decree 694/2017 of 3 July, implementing Law 30/2015.

The State Employment Public Service is working in cooperation with the Autonomous Regions to easily manage employment procedures, both for citizens and companies.

What is the Employment Observatory?

The Employment Observatory of the State Public Employment Service (SEPE), which operates within the Information and Statistics Department of the SEPE's Central Services, comprises a nationwide network whose central structure manages, organises, plans and tailors the work of labour market experts in the SEPE's 52 provincial offices.

It provides reports and analysis on the labour market in the different geographical areas (state, regional, provincial and municipal), using quantitative and qualitative techniques and constantly updated social and occupational indicators.

The Employment Observatory network's tasks in analysing and identifying training needs include reporting on changes in economic activity and occupations, with the aim of anticipating and responding to the challenges and requirements of labour market demand. This network is organised around complementary working groups, enabling interrelationships between methodologies and output.
