

## Regulations

The Occupation Observatory of the Public State Employment Service, with a network distributed throughout the national territory, analyses the situation and trends of the job market and the job training situation...

Law 56/2003 of 16 December, on Employment  
Law 15/2014 of 16 September

*“The Ministry for Employment and Social Security, through the Observatory of the Public State Employment Service, in coordination and cooperation with the autonomous communities in the performance of their competences, through the Sectoral Conference on Employment and Job-related Issues, and with social agents, through the General Council of the National Employment System, will develop a permanent function for search and detection of training requirements in the production system...”*

Law 30/2015 of 9 September

At the Public State Employment Service (SEPE) we work in liaison with the Autonomous Communities to improve job-related management for citizens and employers

## What is the Occupation Observatory?

This is the technical unit of the Public State Employment Service, comprised of a network of professionals throughout the national territory who, with their own means, analyse the situation and the job market trends, challenges and requirements.

It drafts reports and performs market analyses, permanently updating indicators, quality techniques and geographic scopes (at national, autonomous community and province level)

Its studies provide a diagnosis of the requirements for training and reclassification of the job market, to anticipate change and to respond to the demand for qualified labour that may arise, thus contributing to workers' professional and personal development and to corporate competitiveness.

This network of professionals, distributed throughout the central services and the 52 provincial directorates of the SEPE, coordinates its work through teams, developing various activities and taking responsibility for their quality.

To contact any of its 53 offices:
